

Notifications for specific issue types only

Question:

I have a Jira group that needs to receive Email notifications when specific type of Jira issue is created.

Answer:

Create a new notification configuration and configure it as shown in the screenshot below. Note, that we make use of `$jirassimo.groupEmails()` custom helper.

Notification configuration

Name *

Notification to ATeam about new Story or Epic created

Enabled *

☒

You can temporary disable this notification if necessary

Audit enabled

☐

When audit is enabled, each message sent with this configuration is saved as a comment to related JIRA issue

JIRA Event *

Issue created

When this event happens in JIRA - we'll send you a notification, or you can define your custom scheduler

JQL Rule

issuetype = story or issuetype = epic

Additional JQL criteria the issue must match (Mandatory when Custom scheduled).
Also, please make sure Raley notifications add-on has permissions to query your JIRA (managed through user management menu)

Messenger type *

EMAIL

Subject *

#foreach (\$issue in \$issues)
New \$!issue.fields.issuetype.name created
#end

Subject can be dynamically created from issue data using **Velocity** template syntax. Click here to see [how this is done](#)

Email(s) *

-- Choose a predefined option --
\$jirassimo.groupEmails("ATeam")

Put here email or an email comma-separated distribution list who will receive this notification. Address can be dynamic from JIRA fields using **Velocity** syntax. See how this is done [here](#)

Outgoing Mail server

Provided by Raley

Do not notify author of the change

☒

```
<pre>
Hello Team!

A new $!issue.fields.issuetype.name issue was created (<a href="https://myowninstance.atlassian.net/browse/$issue.key">$issue.key</a>).
Please start working on it.

The boss
```
