Snapshot Template predefined variables

You can access the following fields with predefined values in your ODT or DOCX template

Field	Description
$issues	Contains all issues that satisfy given JQL criteria. Normally, your first line on the template should be foreach ($issue in $issues) This applies to both: a single issue snapshot and multiple issues snapshot
$issueLink	Renders an HTML link to your issue
$descriptionHTML	Renders current issue description as rich text
$commentHTML	Renders issue comment as rich text
$commentPlain	Renders issue comment as plain text

In addition to the predefined variables above, you can use our Velocity Helpers as well as Snapshot Template helpers in your template file
