

Raley settings reference

This page contains all settings that you can adjust to tune Raley Emails Notifications behaviour in your instance.

Setting name	Explanation	Example
SEND_MULTIPLE_EMAILS	Specify value "true" if a single email notification should be delivered to each entry in TO, CC and BCC section separately. If this setting is missing or set to anything else than "true", then the value from particular Notification Configuration Send As will be applicable. Note, that applying Send As = Separate emals in notification configuration WILL NOT override SEND_MULTIPLE_EMAILS if this is set to true.	SEND_MULTIPLE_EMAILS=true
API_TOKEN	A special access token that is used to retrieve Assets objects .	API_TOKEN=asfa43492843fs482389

Accessing settings inside Message template is as simple as **\$context.setting_name**
