

Notifying project roles

Problem: You want to notify users who have specific roles in specific project(s).

Solution: Create a new Raley Notifications configuration similar to the following:

Notification details

Title*
Give your notification a name

Enabled ☒
You can disable your configuration temporarily if needed

Audit enabled ☐
When checked, Raley will log every sent message under issue's activity tab: Raley Audit

Notification type*

Project*

Issue type*

Event*

JQL filter
Additional JQL criteria the issue(s) must match.

Run as
Jira username that will run this JQL filter

Send via*

TO \$jrassimo.getProjectRoleEmails("ServiceAdmins", \$projectKey) |"/>
Note comma here

Choose JIRA fields

Do not notify author of the change ☒

CC

BCC

The configuration above will notify users when issues in projects PROB and TTT are commented. Here's how you configure email recipients:

```
#set($projectKey = $issue.fields.project.key)

$jrassimo.getProjectRoleEmails("Developers", $projectKey) ,
$jrassimo.getProjectRoleEmails("ServiceAdmins", $projectKey)
```

On row 1 we pre-save current project key into variable \$projectKey. Then on lines 3 and 4 we retrieve all the users emails who have either role "Developers" or role "ServiceAdmins" in project \$projectKey.

Note, that if you make several invocations to function \$jrassimo.getProjectRoleEmails, then they have to be separated by a comma (,).
