## Welcome to Raley Emails Notifications for Jira & JSM!

Raley Emails Notifications is an app for sending customised Emails and Slack notifications to anyone from your Jira or JSM.

These are the most typical tasks for Raley:

- I need to send attachments in customer emails
- I want to send notifications with Issue PDF snapshots
- I need to notify users on workflow transitions
- I want to send scheduled digest notifications
- I need to include comment history into notification

Here's some more things that Raley can do for you:

- Send an email with fully custom template
- Show any standard or custom field in email body.
- Show Asset fields in email body
- Use your company logo and styling
- Send an email to external addresses or distribution lists
- · Send to an email address taken from a custom field
- Send canned email directly from Jira issue view
- Send email on workflow transition
- · Send the comments history in email
- · Send email from your own SMTP server
- · Dynamic from address and sender name
- Send to CC and BCC addresses
- Send attachments from issue embedded in email
- Send email with Approve/Decline links for JSM ServiceRequest with approvals
- Group all activities on issue into single email
